

LEIBNIZ INSTITUTE  
FOR FARM ANIMAL BIOLOGY

Universitätsmedizin  
Rostock

Traditio et Innovatio

Dear NGS colleagues,

You are cordially invited to the second M.V. NGS Workshop, Monday 8.10.18, approx. 9-18h, in Dummerstorf.

Four years after our first very successful workshop on Next Generation Sequencing in MV, we would now like to invite you all for the second workshop dedicated to this exiting technology. As technical development and NGS projects in MV have moved on, we think that this is the time to demonstrate the wealth of applications and research topics associated with NGS. We want to bring together experts from a variety of disciplines ranging from genetic diagnostics, medicine, farm animal biology or microbiology/virology to bioinformatics and systems biology. We are all united in exploring new perspectives in our fields by applying an ever extending spectrum of protocols and pipelines. We would particularly invite young scientists to participate. As you will see from our program, we intentionally will leave a lot of time slots for discussion with other experts in the fields and will have key note speakers providing perspectives for innovation and future areas of research.

Please feel free to also forward the invitation to colleagues with an interest/expertise in NGS within the FBN or partners in MV.

At <https://sites.google.com/site/nexgenseqmv/workshop2>  
please find

- \* The Flyer, including the Preliminary Program
- \* The Call for Contributions
- \* Registration Information

We are looking forward to your Title+Abstract until 15.07.18. But we would also accept registrations without presentations.

Many thanks and greetings,  
Christa Kühn, Pal Westermarck, Andreas Kuss, Christian Junghanß, Hugo Escobar,  
Israel Barrantes & Georg Fuellen
